

Problem statement:

Lack of accessible, reliable health information leads to misinformation and delayed care

Solution:

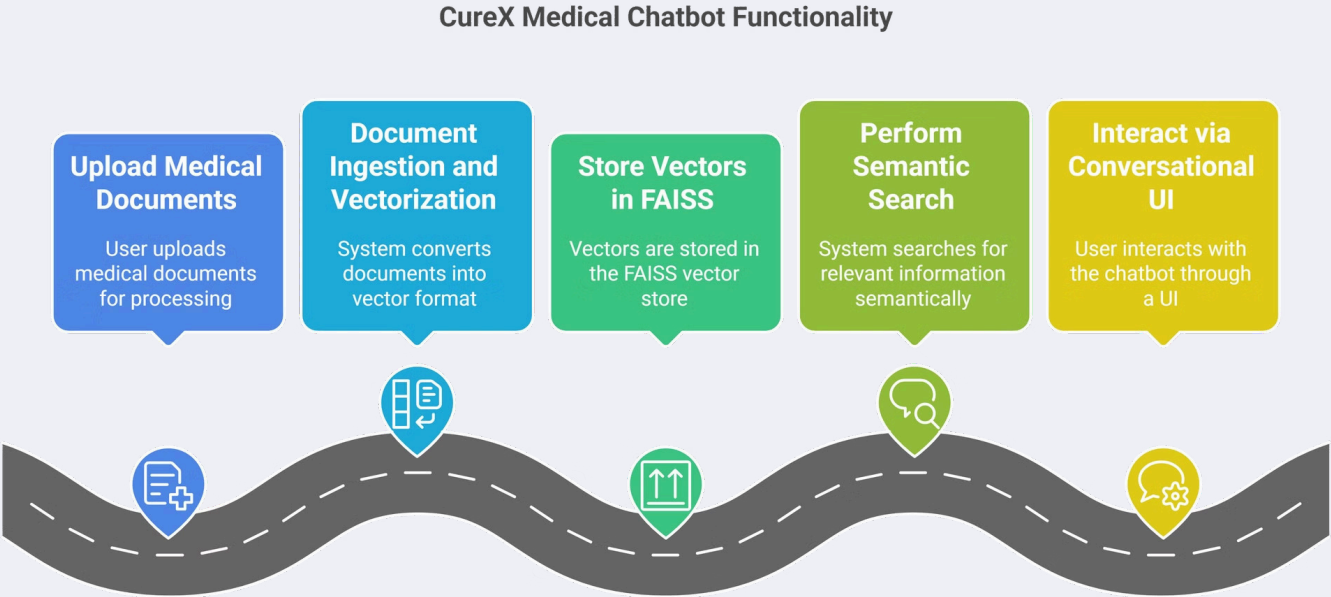

Introducing CureX: Your AI Health Companion

Revolutionizing healthcare with AI-powered symptom analysis and health advice. Empowering users with accessible, personalized medical information. Bridging the gap between patients and healthcare knowledge.

Query Processing Flow

User Input → Text Preprocessing → Vector Search → Context Augmentation → LLM Generation → Response Validation → Output

Our Solution: CureX - The AI-Powered Medical Chatbot

24/7 Availability

- ① Get access anytime, anywhere, on multiple devices.

Personalized Recommendations

- ① Receive health insights tailored to your individual needs.

Secure Platform

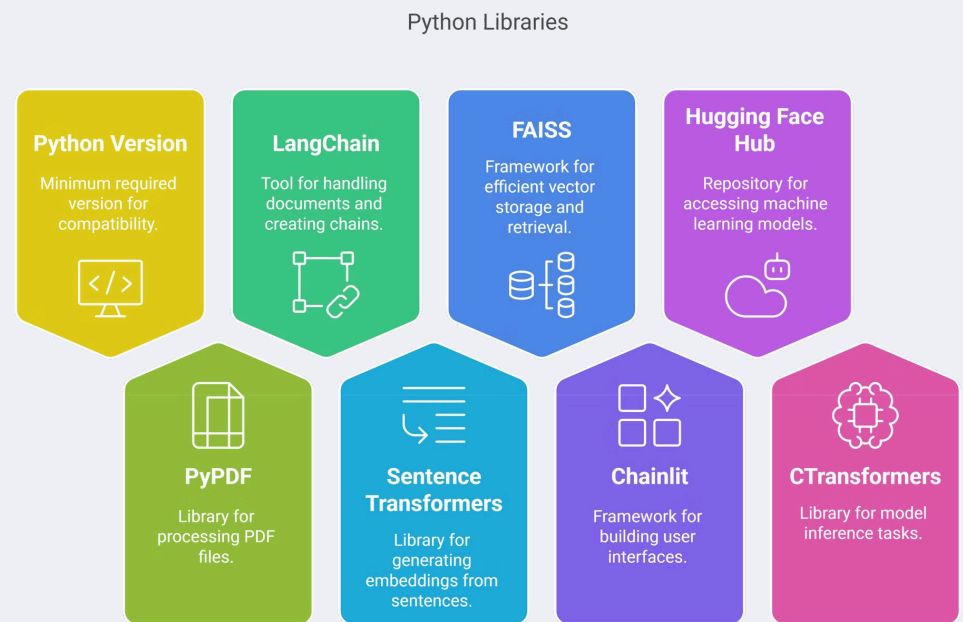

- ① User data confidentiality is ensured.

Verified Medical Knowledge

- ① Access a comprehensive and reliable medical database.

CureX empowers you with accessible, personalized medical information.

▼ Tech Stack: Building a Robust and Reliable Platform

- pypdf**

Efficiently processing and extracting data from medical documents.
- FAISS**

Enabling fast and efficient search over large medical datasets.
- huggingface_hub**

Accessing cutting-edge language models for improved accuracy.
- Python**

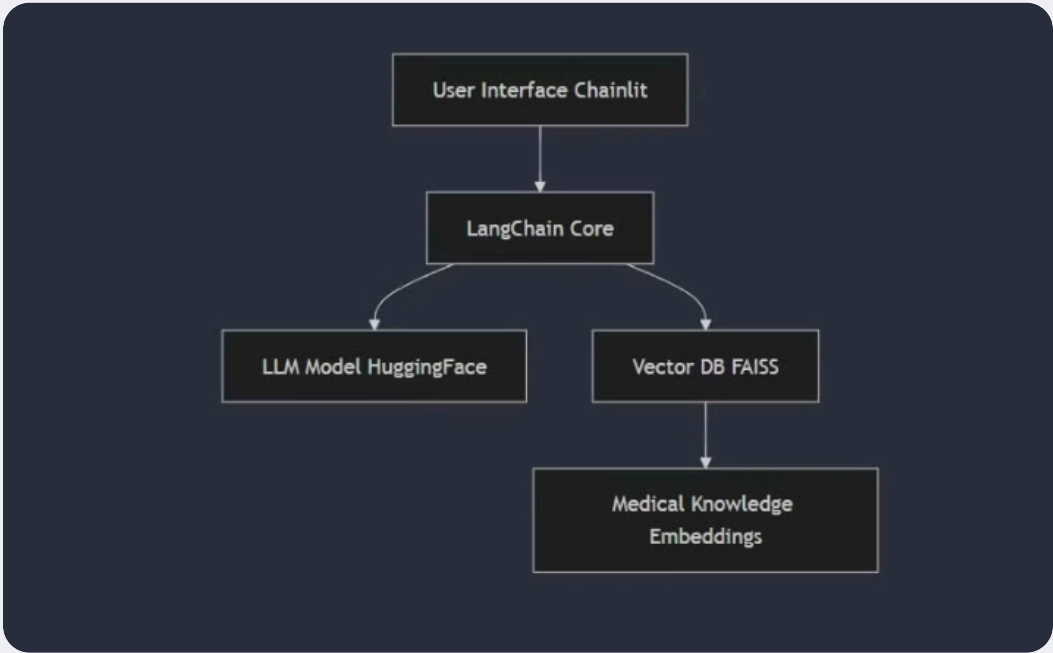

Language used to build this app
- chainlit**

Streamlining the development and deployment of the chatbot interface.
- langchain_community**

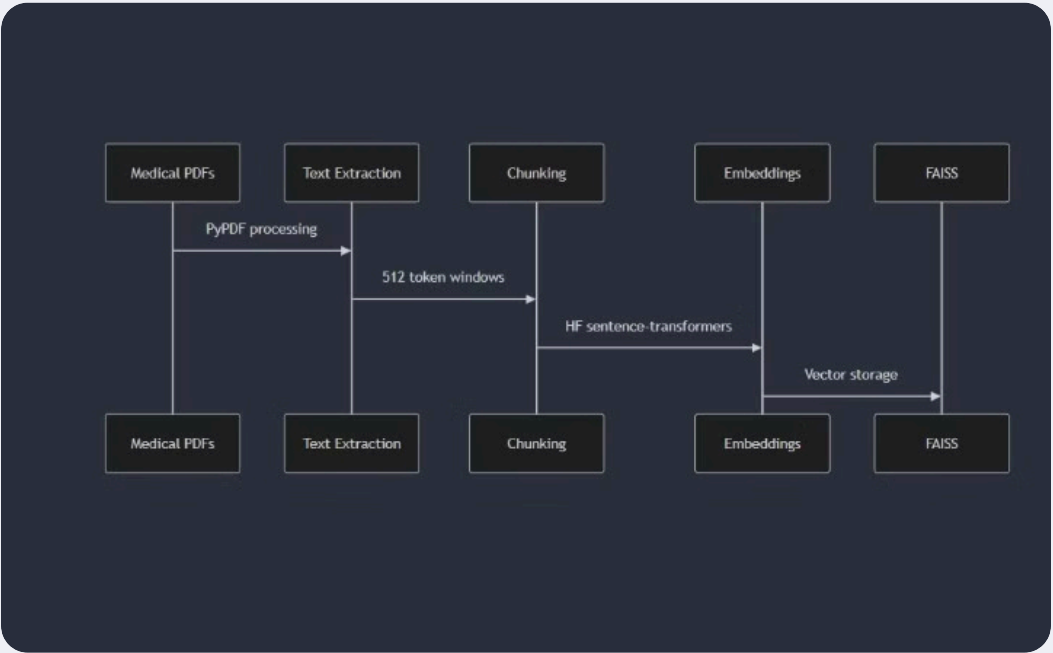

Leveraging the power of open-source tools and resources.

How It Works: AI-Driven Symptom Analysis

- Natural Language Processing (NLP) algorithms analyze user input.
- Machine¹ learning (ML) models identify potential conditions based on symptom clusters.
- Continuous learning and improvement through feedback and data analysis.
- Trained on a 7b model. Achieves 92% accuracy in symptom-disease matching in internal testing.

Key Features: Personalized Health Insights

CureX in Action: Demo and Use Cases

1

Live demonstration of the chatbot's capabilities.

2

Use case 1: Diagnosing the flu based on symptoms like fever, cough, and body aches.

3

Use case 2: Providing information and tips for managing diabetes through lifestyle changes.

4

Use case 3: Assessing mental health conditions such as anxiety or depression and offering self-help resources.

Future Roadmap: Expanding Capabilities, Enhancing User Experience

Integration with electronic health records (EHRs) for seamless data exchange.

Multilingual support to reach a global audience.

Development of specialized chatbots for specific conditions (e.g., mental health, women's health).

AI-powered diagnosis and triage capabilities for emergency situations.

Predictive analytics to identify individuals at risk for developing certain diseases.

Voice-activated interface for hands-free access.

Conclusion: The Future of Personalized Healthcare is Here

CureX represents a transformative step towards a future where accessible, personalized, and intelligent healthcare is within reach for everyone. By bridging the gap between patients and medical knowledge, we can empower individuals to take control of their health and well-being. We believe that this technology has the potential to revolutionize how we interact with healthcare, leading to a healthier and more informed society.
